Cleveland, GA 30528

Mark,

Now that the City of Waycross has had it's Bandalong litter trap in operation for a little over three and one-half years, I can say that it has been a total success for us. Our litter trap has been in service since early April 2010, and to date we have emptied 349 cubic yards of floating litter, and that is with 148.7 inches of rainfall. We feel that we are intercepting and removing at least 99% of floating litter from our canal system just before it would be entering the Satilla River, one of the most pristine black-water rivers in the State of Georgia. This litter which the Bandalong is capturing would be flowing into the Atlantic Ocean through St. Andrews Sound, between two of the famous Golden Isles of Georgia, Jekyll Island and Cumberland Island.

We in the City of Waycross Engineering Dept. have been extremely satisfied not only with the superior build quality with which the Bandalong is crafted, but also with the first-rate service after the sale and the commitment to quality and to clean water which Storm Water Systems Inc. has demonstrated.

Thank you,

Steve Pope  
Project Manager  
Engineering Dept.  
City of Waycross
